

Charlie Godfrey

[godfrey-cw.github.io](https://github.com/godfrey-cw) | godfrey.cw@gmail.com | www.linkedin.com/in/godfrey-cw

Skills

- **Research:** empirical science of foundation models, novel deep learning architecture components, interpretable and explainable AI, evaluating and understanding trustworthiness of machine learning systems.
- **Data modalities:** computer vision, reinforcement learning, natural language processing.
- **Tools:** Python (PyTorch, Huggingface, NumPy, SciPy and Pandas), Git, Bash, Linux, cluster computing (SLURM), AWS (EC2), Azure virtual machines.

Experience

Postdoctoral Research Associate, [Pacific Northwest National Laboratory](#)

October 2021 - Present

National Security Directorate, Mathematics of Data Science Team

- Adapted highly efficient MosaicBERT language model training to internal cluster computer environment, obtaining a 50% improvement in throughput (tokens/second) and thus dramatically reducing the cost of training these language models; in situations where compute budget was fixed, this resulted in increased accuracy of trained models.
- Improved performance of segmentation models for multispectral satellite images (5 % relative increase in Intersection-over-Union, the standard accuracy metric for segmentation models) by implementing multi-GPU distributed training, which facilitated learning for more epochs.
- Accelerated training of neural image compressors (from 3 minutes to 6 seconds per epoch) by incorporating a modernized data loading and preprocessing pipeline. This reduced the total training time from 11 days to 12 hours, allowing for more rapid hyperparameter sweeps to optimize performance.
- Investigated safety and security of machine learning systems; constructed datasets to measure out-of-distribution performance of computer vision models.
- Presented results to senior leadership and project sponsors in the form of slide decks and technical reports — comfortable conveying research findings at appropriate level of technical detail.

Program Associate, [Mathematical Sciences Research Institute](#)

March-May 2019

- Participated in the Birational Geometry and Moduli Spaces semester program.
- Presented research on logarithmic Chow-to-Hodge cycle maps at the institute's graduate student seminar.

Education

PhD in Mathematics, The University of Washington-Seattle

June 2021

- Extended results on singularities using inductive construction algorithms for semi-simplicial schemes. Built a new Fourier-type transform on differential forms with poles using duality theory. Defined generalizations of ordinary elliptic curves over finite fields and studied their deformations.
- Completed the [eScience Institute's Advanced Graduate Data Science Option](#) (PhD-level courses in machine learning, data visualization and statistical inference, implemented machine learning methods like LASSO, kernel regression and k-means clustering in raw NumPy and SciPy).
- Department of Mathematics Graduate Fellowship (2018-2019)

Student, [MSRI Mathematics of Machine Learning Summer Graduate School](#)

July 29-August 9 2019

- Attended mini-courses and problem sessions on statistical learning, convex optimization, deep learning and reinforcement learning.

- Presented an expository account of recent work on linear stochastic bandits.

Master's of Science in Mathematics, The University of Washington-Seattle

June 2018

Bachelor's of Science in Mathematics and Physics, The University of Wisconsin-Madison

May 2014

Mentoring

Industry Mentor, [Math-to-Industry Boot Camp](#)

July 2023-August 2023

- Mentored a team of math PhD students evaluating the usefulness of GPT-type large language models for scientific knowledge retrieval and the robustness of Segment Anything for person (e.g. pedestrian) detection.
- To facilitate this capstone project, implemented a Segment Anything inference endpoint using TorchServe running on a Lambda Labs instance.

Graduate Mentor, [Washington Experimental Math Laboratory](#)

January 2019-December 2020

- Mentored undergraduate research projects on foundations of quantum mechanics and mathematical epidemiology.
